PROJECT NAME: EcoTrack

TEAM MEMBERS: Prodan Nicoleta

IDEA IN SHORT: An Android app targeting small to big cities that provides a personal carbon emissions tracker based on transportation and home energy consumption. (electricity, natural gas, coal, wood)

Hardcore Entrepreneur hackathon 5.0

1.PRODUCT - PROBLEM WE SOLVE

EcoTrack addresses the growing concern of carbon emissions and the lack of accessible tools for individuals to track and reduce their environmental impact. Many people are unaware of their daily carbon footprint, making it difficult to take actionable steps toward a more sustainable lifestyle. The app provides a comprehensive platform that allows users to monitor and analyze their carbon emissions based on transportation choices and home energy consumption. EcoTrack empowers users to make informed decisions about their environmental impact. Additionally, the app features an eco trained chatbot that can respond to any environment related questions and integration with Google Maps API to automatically calculate emissions from daily commutes. This encourages users to adopt eco-friendly behaviors, such as opting for public transportation, reducing energy waste, or using alternative energy sources. By raising awareness, EcoTrack helps individuals contribute to a cleaner, more sustainable future, bridging the gap between intention and action in the fight against climate change.

2. OUR TARGET GROUP & SDGs

EcoTrack directly supports Sustainable Development Goal 13 (Climate Action) by helping users measure, understand, and reduce their carbon footprint. By tracking emissions from transportation and home energy consumption, the app empowers individuals to make data-driven, sustainable choices. It also encourages behavioral change through its educational insights, contributing to a collective effort to combat climate change. The primary users of the EcoTrack app are environmentally conscious individuals in Romania, particularly those living in urban and suburban areas where pollution and energy consumption are higher. These users are aged between 20 and 50 years old and have a strong interest in sustainability and reducing their carbon footprint. Many are professionals, including IT specialists, engineers and entrepreneurs, who are actively seeking ways to adopt a more sustainable lifestyle. They are data-driven, and motivated by personal and societal environmental impact. Behaviorally, this group is highly receptive to digital tools that provide insights into their ecological footprint. They are proactive in making changes to their daily routines, such as using public transport and optimizing home energy consumption.

3. SMART OBJECTIVES

Specific: Acquire 1,000 active users within the first six months by leveraging targeted digital marketing and sustainability communities.
Measurable: Ensure that at least 70% of active users log their carbon footprint at least twice a week by the end of the first year.
Achievable: Develop a reward-based system where users who reduce their carbon footprint by at least 20% over three months receive discounts or eco-friendly rewards from partner organizations.
Relevant: Increase user engagement by 50% per quarter, measured through app activity (log entries, point system interactions, and chatbot usage).
Time-bound: Establish five strategic partnerships with sustainability-focused companies, NGOs within the first 12 months to promote and expand EcoTrack.
Additional: Introduce a community leaderboard by the end of the first year, encouraging friendly competition and increasing user engagement by 30%.

4. PRICE

EcoTrack will generate revenue through sponsorships and a business-tier version of the app.

Sponsorships & Partnerships: Collaborating with eco-conscious brands, NGOs, and sustainability-focused businesses to promote green initiatives within the app. Sponsors can support challenges, provide rewards for low-carbon users, and fund awareness campaigns.

Business Version: Companies can subscribe to a premium analytics dashboard that helps track and report employee carbon footprints. This version will include detailed insights, emission reduction strategies, and compliance tracking to assist businesses in their sustainability goals.

5. PROMOTION

- **Strategic Partnerships & Sponsorships:** Collaborating with sustainability-focused organizations and eco-friendly brands to promote the app through joint campaigns, social media content, and sponsored challenges.
- **Business Version Outreach**: Targeting companies interested in corporate sustainability by offering a business-oriented version of the app that helps them track and reduce employee carbon footprints.
- **Educational Content & Awareness Campaigns:** Running online and offline campaigns to educate users on carbon footprints, sustainable living, and the benefits of using the app.
- **Hackathons & Sustainability Events:** Showcasing the app at relevant events, competitions, and industry conferences to attract both individual users and business clients.
